**New Downloads Available – ACE, POST and CO\$TAT Hotfixes**

You must have ACEIT 7.4a installed prior to installing any of the hotfixes.

Following are the key issues that have been resolved. See the News article on [ACEIT.com](http://ACEIT.com) for [more information](#).

**ACE Hotfix 7.4a-001**

- ACE recalculated with RI\$K when creating a TY allocated report when it was not necessary
- When part of the WBS workscreen tree was collapsed, Fill Up and Fill Down commands used with more than one column didn't copy second column to the correct rows. Also, the Formula bar would stop displaying row information.
- Slow performance was experienced in very large sessions when using commands such as Replace All even when the WBS workscreen tree was hidden. A new 'Disable workscreen tree' User Option has been added and should be checked prior to using Replace All with very large sessions.

**POST Hotfix 7.4a-002**

- RI\$K-allocated reports did not update properly if session property 'always calculate with RI\$K' was unchecked; point estimate results were reported.
- Editing case properties of an input sheet case cleared out cell links to other worksheets

**CO\$TAT Hotfix 7.4a-003**

- For Fixed cost learning, percentage error table was missing data if there were missing data points in the dataset
- Univariate: Normal Probability Plot data table showed incorrect observation names when there was a duplicate value in the dataset and had missing data if there were missing data points in the dataset
- Slow performance of pairwise analysis with large datasets
- There was a limit to the number of cases based on case name and number of cases, this has been significantly increased
- Report title did not contain the dataset name and case name

To download any of the Hotfixes, please go to ACEIT.com and select Support>Downloads>[Software Patches](#). Click on one or more of the ACEIT 7.4a hotfixes. Please email [ACEIT Support](mailto:ACEIT_Support) if you have any questions!
