### **CO\$TAT Feature Highlight – Distribution Finder!**

In addition to traditional regression analysis, CO\$TAT contains a feature that allows you to find the distribution shape that most closely matches your data. This is very useful for specifying uncertainty when basing your estimate on the average or median of an analogous dataset. The Distribution Finder compares your sample data against various distribution shapes and ranks them according to the best fit. The distributions supported are Log Normal, Normal, Triangular, Beta, Uniform, BetaPert, Student's t and Log t. Numerous settings are provided to set minimization method, Chi<sup>2</sup> test statistics and constraints. The report provides statistics about the fit of each distribution and whether or not it is statistically significant. See CO\$TAT help for more information.
