## Tip of the Month

*Did you know that you can turn RISK on and off on a row-by-row basis?*

The RISK On/Off column is located on the RISK All Columns workscreen and allows you to remove the uncertainty for a row without having to delete the uncertainty specification. This is useful if you want to see how the uncertainty for a specific row or set of rows affects the uncertainty at the total.

To disable RISK for a row, simply type "Off" into the RISK On/Off column to disable the uncertainty. You can also create a variable to turn the RISK on or off. Enter a value of "1" for "On" which will calculate the row with RISK and "0" for "Off" to exclude the uncertainty calculation for the row.

Please see example file "95 – CSRUH Missile Model.aces" for an example that uses variables to enable/disable uncertainty calculations for particular rows. (Example files are accessed from the File menu in ACE).
