- ACEIT 8.3 Release
- New Knowledge Base Article
- ACEIT 8.3 Tutorials

ACEIT 8.3 Available!

We are thrilled to release our latest software update, ACEIT 8.3, which builds on the Inflation/Escalation updates to 8.2. In ACEIT 8.3, we've revamped ACEIT Librarian to empower analysts to dive deeper into the indices and rates that drive their model. Users can now use ACEIT Librarian to build, edit, review, and analyze Inflation/Escalation and Currency Exchange indices and rates. With built-in best practices and enhancements to ACE and POST, Librarian stored data flows through the software suite for end-to-end utility.

Highlights of the update include:

- Enhanced Librarian interface for Inflation/Escalation and Currency Exchange indices.

- Improved user indices and exchange rate management.
- Integrated currency exchange functionality across the ACEIT suite.
- Streamlined organization table distribution for a simpler update process.

Please read the "ACEIT 8.3 Release Notes" for an inclusive list of our new features and enhancements. We also recommend downloading the "Welcome to ACEIT 8.3" presentation and "ACEIT 8.3 Quick Start Guide" as additional help resources. We hope you enjoy ACEIT 8.3!

- Install Instructions

New Knowledge Base Article: Creating a Row with a Different Input Currency

ACEIT 8.3 introduces standardized, end-to-end currency exchange functionality. Previous versions of ACEIT required users to conduct currency conversions manually in ACE, with ACEIT 8.3 users can now create exchange rate tables in ACEIT Librarian and apply them directly to ACE session rows. This allows users to enter values in multiple currencies and convert them into a selected base currency directly in their ACE model. This article offers a step-by-step guide on how to implement multiple currency types in your ACE session.

Updated Knowledge Base Content: ACEIT Tutorials

The ACEIT Knowledge Base includes a series of ten Tutorial articles to help new users get started with ACE. Updated for 8.3, these tutorials provide a step-by-step guide to setting up a cost estimate in ACE. Each tutorial is designed to build upon the previous one, starting with an introduction to the ACE interface and proceeding through each stage of building an estimate. The articles outline how to define the WBS/CES, enter estimating methodologies, perform what-ifs, view time phased results, document the estimate, review and refine the estimate, set up summary sections, create reports, and incorporate learning curves. Special emphasis is placed on best practices for accuracy and efficiency, and the utilization of ACE's advanced features for scenario analysis and cost optimization. By the end of the series, participants will be equipped with an understanding of how ACE works and will have built their first cost estimate in ACE 8.3.
